

Industry Survey Findings:

2019 Top Network Performance Challenges

Research Background

In December of 2018, Sirkin Research was commissioned by LiveAction to identify the top network challenges faced by enterprise-level organizations in complex, hybrid networks. The survey was sent to network and IT professionals predominantly in large mid-market and enterprise companies with at least 1000 employees. The results are based on perspectives from 204 survey respondents, and provide rich insights into the network performance challenges large organizations encounter daily.

#1 Network Challenge Faced by Enterprise-Level Organizations in Complex, Hybrid Network Environments

43%

Of network professionals are challenged to find the time to work on strategic business initiatives

Root Cause

42% Too much time troubleshooting across entire network

38% Cannot proactively identify network performance issues

35% Poor visibility into performance across all fabrics of the network

35% Poor end-to-end performance monitoring across network devices

31% Spend too much time managing cumbersome work-flows between critical systems

About LiveAction

LiveAction is #1 in network performance visualization and analytics, providing network professionals the situational insights needed to easily manage and control end-to-end performance of multi-fabric, multi-vendor, and multi-cloud environments. LiveAction empowers network professionals to proactively identify, troubleshoot and resolve issues across vast hybrid environments, and to become more efficient by simplifying the management of cumbersome workflows.
